Dear Terry,

Tempus Dashboard Mounted Computer Dock

Following on from our correspondence, I can confirm that your dashboard mounted computer docks have undergone successful testing in accordance with the deceleration requirements of ECE Regulation 17.07 in order to establish the computer retention capabilities, the results of which are recorded under Hyge test numbers H828B1, H828B2 and H828B3.

The docking systems have been tested for forward and rearward simulated impacts using Ford Focus and Skoda Octavia dashboards with the dock mounted into the standard DIN radio fixing. The dashboards have been mounted onto a rigid structure which is representative of any generic vehicle fixing. On that basis, providing the same dock fixing method into a similar or stronger material type dashboard is utilized, these results could be read across for other vehicle types.

I trust this helps you in this matter. Please feel free to contact me if you have any questions.

Yours sincerely
